Education

Iowa State University

Bachelor of Science in **Computer Science and Data Science**, Minor in **Statistics**

GPA: 3.41/4.0

Anticipated: May 2026

Ames, IA

Skills

Languages Java, C#, R, Python, SQL, SAS

Web Design HTML5, CSS, JavaScript, React

Tools Git, Visual Studio Code, RStudio, SAS Studio,
Android Studio, Microsoft Office

Libraries Pandas, sklearn, NumPy, matplotlib, BeautifulSoup,
dplyr, ggplot2, seaborn, cowplot

Experience

Electrical Power Products - C#, MS-SQL Server

May 2023 – August 2023

IT Programmer (Intern)

Des Moines, Iowa

- Developed Win forms, designed GUI software applications that are easy to use for 400+ employees to use on a day to day basis
- Regularly developed T-SQL queries on large, complex datasets used to analyze data, support operations and create reports
- Designed and implemented intricate engineering reports with user-friendly interfaces for efficient data entry and printing
- Worked with the end user to create applications that clearly defines their needs
- Tested and created software for users and used a debugger to efficiently fix bugs in programs

Projects

Robotics Chess Project - Python, OpenCV, ROS, Git, YOLOv8 Nano

August 2025 - December 2025

- Collaborating in a 4-person Agile team to develop an autonomous robotic chess system for a client, delivering sprint-based milestones and demo presentations using GitLab for version control
- Designed and trained a YOLOv8 model on 800+ annotated images in Roboflow, achieving robust real-time detection of chess pieces and board corners in diverse conditions
- Engineered a modular computer vision pipeline using OpenCV for live detection, homography transformation, and board-state generation integrated with a Stockfish move engine
- Built and validated an end-to-end ROS control framework enabling automated piece movement through inverse kinematics, waypoint planning, and MuJoCo-based robotic simulation

UniTrade (Front-end developer) - Java, Android Studio, Git

August 2024 - December 2024

- Designed and implemented interactive user interfaces for seamless navigation and user experience, integrating features for listing items, messaging, user profiles, and admin control
- Collaborated closely with back-end developers to ensure smooth data flow and integration between front-end interfaces and server-side functionalities
- Successfully met deadlines for app demos, delivering fully functional features on schedule while adapting to feedback and team goals

Full Court Forecast (Founder) - Python, Git, Pandas, MySQL

May 2025 - Present

- Developed a python based web scraper using pandas to extract and clean NCAA college basketball statistics from Sports Reference, generating 500+ structured DataFrames
- Designed and applied data cleaning functions to standardize inconsistent formats, rename categories, and handle missing values
- Continuing statistical analysis and exploratory data visualization of team and game performance metrics to identify trends in wins, losses, and efficiency stats
- Applying machine learning techniques (logistic regression, random forest, neural networks, etc.) to predict game outcomes.

Involvement

Computer Science and Engineering Club

September 2023 - Present

Competitive Programming Practices

September 2024 - May 2025

Intramural Leagues: Soccer, Football, Basketball, Pickleball, Volleyball, Softball

Fall 2022 - Present
